# ALTERNATOR MOUNT 40-216L

Big Block Chevy - Driver Side  
Short Waterpump

NOTE: Some heads have 3/8" bolts and some have 7/16". This kit includes both sizes of bolts for these holes.

If your head has 7/16" bolts it will be necessary to enlarge the corresponding holes in the mount to 7/16". When installing the mount, start all bolts and mount the alternator belt before tightening. The alternator belt will run in the second groove from the front of the crank and waterpump pulleys originally used for the factory compressor. This bracket is designed to be used with our 40-116R passenger side compressor mount.

It can be used with single groove crankshaft and water pump pulleys by using a double groove alternator pulley and running the belt in the outer groove.

We use a belt length of 52-53" with this mount on installations in our shop. This was determined using GM Part #14025185 crank pulley and GM Part #14023155 Water Pump Pulley.

**As with any part of this nature, make sure it fits your application before painting or plating. Parts that have been painted, plated or modified may not be returned.**
