The alternator belt will run in the second groove from the front of the crank and water pump pulleys originally used for the factory compressor. It was designed to be used with our Passenger Side Compressor Mount.

It can be used with single groove crank and water pump pulleys by using a double groove alternator pulley and running the belt in the outer groove.

**As with any part of this nature, make sure it fits your application before painting or plating. Parts that have been painted, plated, or modified may not be returned.**
